Election Security

CISA works to secure both the physical security and cybersecurity of the systems and assets that support the nation's elections.

Election Security

Best Practices for Securing Election Systems

Foreign Influence Operations and Disinformation

CISA works to provide election stakeholders with the information they need to manage risk to their systems and assets.

Overview

Every year, citizens across the United States cast their ballots for the candidates of their choice. Fair and free elections are a hallmark of American democracy. The American people's confidence in the value of their vote is principally reliant on the security and resilience of the infrastructure that makes the

Nation's elections possible. Accordingly, an electoral process that is both secure and resilient is a vital national interest and one of CISA's highest priorities.

In January 2017, the Department of Homeland Security officially designated election infrastructure as a subset of the government facilities sector, making clear that election infrastructure qualifies as critical infrastructure. This designation recognizes that the United States' election infrastructure is of such vital importance to the American way of life that its incapacitation or destruction would have a devastating effect on the country. Election infrastructure is an assembly of systems and networks that includes, but is not limited to:

- Voter registration databases and associated IT systems;
- IT infrastructure and systems used to manage elections (such as the counting, auditing, and displaying of election results, and the post-election reporting to certify and validate results);
- Voting systems and associated infrastructure;
- Storage facilities for election and voting system infrastructure; and
- Polling places (to include early voting locations).

CISA works to secure both the physical security and cybersecurity of the systems and assets that support the Nation's elections.

CISA's Role

CISA is committed to working collaboratively with those on the front lines of elections—state and local governments, election officials, federal partners, and private sector partners—to manage risks to the Nation's election infrastructure. The Agency provides resources on election security for both the public and

election officials at all levels and will remain transparent and agile in its vigorous efforts to protect America's election infrastructure against new and evolving threats.

Featured Content

Election Security Rumor vs. Reality </rumor-vs-reality>

Rumor vs. Reality provides accurate and reliable information on common disinformation narratives that relate to the security of election infrastructure.

Election Cybersecurity Toolkit </cybersecurity-toolkit-and-resources-protect-elections>

CISA—through the Joint Cyber Defense Collaborative (JCDC) </joint-cyber-defense-collaborative> —compiled a toolkit to help state and local government officials, election officials, and vendors enhance the cyber resilience of U.S. election infrastructure.
